

## **Overview**

AVI's D122X series modular rugged multifunction display is a 1280x800 resolution, 8-bit color, high-contrast, high-brightness unit that provides impressive image clarity. With a 12.1" diagonal viewing area, this light-weight 2.2 Kg (5 lbs) unit provides a small foot print of only 305mm x 211mm x 28mm (12" x 8.3" x 1.1"). The D122X series features hardened cover glass with Projective Capacitive (PCAP) touch screen, direct sunlight readable, 3G-SDI input and output, up to sixteen selectable video layouts for the four 3-G SDI inputs, fully IP68 rated and many other outstanding features.

AVI's new range of displays use a modular approach to provide higher reliability, lower costs, and greater installation flexibility. Each display system consists of three modules – the LCD Module, the Display Electronics Unit (DEU), and the User Interface Module (UIM).

The LCD Module contains only the LCD and backlight driver. This removes most of the heat and noise generating electronics allowing extended operating temperatures, longer LCD life, and lower weight. Mounting is provided by either four front panel mounts, three mount points on each side, or a 100mm VISA mount on the back.

The DEU contains the LCD driver, DC/DC converter and video

processors. Connection to the LCD Module is via an AVI provided Embedded DisplayPort (eDP) cable or can be directly attached to the back of the LCD Module.

Contact AVI for latest specifications and available options. www.appliedvi.com info@appliedvi.com 434 974-6310

The DEU can be placed up to 2 meters (6.5') from the LCD Module. This facilitates various options for mounting the LCD

Module in tight locations or on articulated display mounts.

#### Figure 4 – User Interface Module.

AVI's innovative PCAP based User Interface Module (UIM) is also provided as a separate module. Various module configurations are available. The unit can be panel mounted wherever the user

wants it or can be attached to any of the mounts on any side of the LCD Module.

Communication to the UIM is via RS485. The UIM can be daisy-chained up to seven units so multiple display configurations can be accommodated.

Figure 5 – LCD Module with DEU attached.

## **Standard Features**

- 1280x800 resolution with 8-Bit color (RGB) for pristine images
- Optically bonded LCD and AR coated cover glass for additional strength and higher contrast
- Sealed enclosure (IP68) for extreme environments
- Four 3G SDI video Input and active image output

- Supports all SMPTE standard resolutions and frame rates through 425M
- Frames and enclosures milled from aircraft aluminum
- Direct sunlight viewable ( $\geq$  1000 cd/m<sup>2</sup>)
- PCAP Function buttons that will never wear out
- VESA Mount, Panel Mount, or 3-point mounts on all sides provides flexible mounting options
- -30  $C^0$  to 70  $C^0$  operation
- Heat dissipating frame and enclosures
- Attached or remotely located electronics module
- Attached or panel-mount user interface module
- Lightweight LCD module for flexible mounting options
- Quad image processing with up to 16 image layouts
- Extreme shock and vibration capable
- 9 36 V DC Power
- MIL-STD circular power, signal, and Ethernet connectors
- Three-year warranty

## **Options**

- NVGS Class B
- Touch Screen
